SUMMARY

Business Intelligence Developer with M.S. in Business Analytics and 3 years of hands-on experience designing dimensional data models and automating workflows across healthcare, fintech, supply chain, and real estate domains. Known for designing dimensional warehouses (star schemas, SCD Type 2), engineering SQL-based ETL automation that reduces manual reporting by 80%, and architecting Power BI solutions to identify critical metrics. I strategically rotated through 3 organizations in India to build cross-domain expertise; supply chain operations, e-commerce and healthcare, proving adaptability and deep analytical thinking. Currently building scalable infrastructure as a probono at Community Dreams Foundation; actively pursuing cloud certifications (DeepLearning.AI Data Engineering + AWS Fundamentals) to strengthen infrastructure expertise.

EDUCATION

University of Massachusetts Amherst
Master of Science in Business Analytics

Amherst, MA
September 2023 – May 2025

- **Coursework:** AI in Business, Data Science, Business Intelligence & Analytics, Data Mining, Supply Chain Analytics, Statistics, Data Management, Project Management, Agile Scrum
- **Activities:** Program Manager - Club Sports at UMass RecWell & Member of Business Analytics club

Presidency University
Bachelor of Technology in Mechanical Engineering

Bengaluru, India
May 2017 – November 2020

- **Coursework:** Calculus I & II, Multivariate Calculus, Advanced Linear Algebra, Probability & Statistics

TECHNICAL SKILLS

BI & Analytics: Power BI (DAX, Data Modeling, Power Query) • Tableau • Excel (Advanced)

Data Warehousing: ETL/ELT Design • Dimensional Modeling (Star/snowflake Schema, SCD Type 2) • Data Quality Frameworks (Great Expectations)

Databases & Cloud: AWS (S3, Glue, Redshift, Athena, RDS) • Snowflake • PostgreSQL • MS SQL Server • NoSQL

Programming & Automation: Python (Pandas, NumPy, Scikit-learn, Matplotlib, SQLAlchemy, GeoPandas) • SQL (PostgreSQL, T-SQL, MySQL) • Git/GitHub

PROFESSIONAL EXPERIENCE

Pro Bono Business Intelligence Developer
Community Dreams Foundation

August 2025 – Present
Remote

- Community Dreams Foundation lacked real-time visibility into corporate housing consolidation patterns across 10.8M Florida parcels for advocacy planning
- Designed executive dashboard tracking institutional investor penetration and community displacement risk
- Architected Power BI Housing Risk Radar with dynamic KPI scorecards, drill-through navigation across 67 counties and 3,355 ZIP codes, and bookmark-driven stakeholder reports integrating SQLite star schema warehouse
- Enabled identification of 21.4% corporate ownership baseline and reduced policy analysis time from days to hours, supporting automated fair housing regulatory submissions

Business Analytics Intern
NICE Actimize (Financial Technology)

May 2024 – July 2024
Hoboken, NJ

- Refactored legacy T-SQL data validation scripts into PostgreSQL by resolving syntax incompatibilities and procedural logic issues, supporting a broader cloud migration for critical AML workflows across multiple regions
- Developed a suite of PostgreSQL queries to execute strict referential integrity, domain, and uniqueness checks, identifying and preventing data anomalies in financial transaction records
- Automated the data validation testing process for on boarding clients in AML analytics workflows, reducing manual QA cycle times by 80% during the database transition
- Created a reusable T-SQL to PostgreSQL syntax translation matrix and a version-controlled script library, presenting final project deliverables and efficiency gains to C-suite stakeholders

Business Intelligence Developer*Sparcolife Digital Healthcare*

September 2022 – August 2023

Bengaluru, India

- Clinical and product teams lacked comprehensive visibility into patient onboarding workflows and struggled to pinpoint the specific friction points causing patient churn
- Developed an end-to-end proof-of-concept (PoC) analytics solution using a sample dataset to map engagement funnels and enable self-service clinical reporting
- Built interactive Power BI dashboards with custom DAX measures, driven by complex SQL views (CTEs, window functions) and Python-based EDA (Matplotlib/Seaborn) applied to the sample PoC dataset
- Delivered a functional prototype that uncovered a critical 48-hour retention drop-off, providing actionable insights to optimize healthcare delivery and patient follow-up protocols

Data Operations Analyst*Indian Vellness Solutions*

November 2021 – September 2022

Bengaluru, India

- Designed Python and SQL-based ETL pipeline consolidating fragmented post-acquisition data into centralized analytics repository, reducing inventory reporting latency by 90% (3 days to 30 minutes) and enabling geospatial dashboard that projected 15%-20% reduction in Northern region shipping costs

Supply Chain Data Analyst*Transview Enterprise Pvt. Ltd.*

October 2020 – October 2021

Bengaluru, India

- Executed exploratory data analysis (EDA) and A/B testing on warehouse fulfillment lifecycles to drive an ABC slotting redesign, successfully reducing Pack-to-Load cycle times by 66% (72 to 24 hours) and cutting executive time-to-insight from 2 days to under 4 hours

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Completed: DataCamp (Associate Data Engineer in SQL, Data Analyst in Python & Power BI) • Lean Six Sigma Yellow Belt**Currently Pursuing:** AWS Certified Data Engineering Specialty (Q2 2026) • DeepLearning.AI Data Eng. Certificate • Google Project Management
